

Jeff Weber 432-687-5445, [jeff@jeffweber.net](mailto:jeff@jeffweber.net)

Jeff,

This is a twin trailer mounted combination cement/acid/frac unit. It is a multi-functional unit also because it can be used as a cementer (with the batch mixer), also as a acid pumper (20 bbl. tank can be used to gel acid, or other blended agents), or as a full blown 1500 horsepower frac unit. It has a self contained 170 horsepower hydraulic system for the centrifugal pumps, plus the 20 bbl. tank has hydraulically driven agitators in each compartment for additional blending capability.

It is as follows:

- (2) Cummins 1710-C diesel engines (700-750 horsepower)
- (2) Allison CLT-6061 automatic transmissions
- (2) Halliburton HT-400 tri-plex pumps - 4 inch fluid ends
- (1) 20 Bbl. - 2 compartment mix/displacement tank
- (1) Perkins auxillary engine for hydraulics
- (2) Centrifugal pumps - (1) 3 inch x 4 inch for displacement tank add and recirculating and (1) 5 inch x 6 inch for boost to the twin pump (in case both in operation in frac mode)

Walk Up operator platform and control console for entire one man unit operation.

36 Feet Long Trailer

Price: \$825k, f.o.b Houston, Texas - subject to prior sale
